Asynchronous Motors

ASM Overview

General technical information

Speed measurement

An integrated rotary encoder from HEIDENHAIN measures the shaft speed.

- Motors with a solid shaft are fitted with an ERN1381 encoder with 1024 lines.
- Motors with a hollow shaft are fitted with an ERM280 encoder with 600 lines.

Specifications

The specifications and the performance curves apply when motors are mounted without thermal insulation. All ratings apply with a maximum temperature rise of 105K on the winding based on a maximum ambient temperature of 40°C. If the motor is mounted so that it is thermally insulated, it is necessary to reduce the motor torque in order to avoid thermal overloading of the motor.

Shaft bearing

SEM asynchronous motors are fitted with maintenance-free bearings. The shaft bearings used on **motors with solid shaft** are available as either standard or high specification spindle bearings. When using spindle bearings the motor can withstand greater radial forces and allowing for higher spindle speeds. Motors with spindle bearing are slightly longer.

Hollow-shaft motors are always fitted with the high specification spindle bearings.

Mechanical life

The service life of the bearings depends on the shaft load and the average shaft speed (contact SEM for further details).

The nominal bearing service life is 10000 hours - this depends on the specific motor, the maximum shaft load and the average motor shaft speed.

Shaft end

ASM asynchronous motors from SEM have a shaft extension end as per DIN 748-1. The solid-shaft motors have a centering hole as per DIN 332-DR.

The standard versions of the asynchronous motor have a plain shaft (without keyway and feather key). Upon request the motors are available with keyway and feather key as per DIN 6885-1.

Feather key:

ASM 200: AS 10 x 8 x 70

ASM 260: AS 12 x 8 x 90

ASM 320: AS 16 x 10 x 90

Precision balancing

Balancing of ASM asynchronous motors from SEM can be done at any time.

Hollow-shaft motors

The ASM 200 UH and ASM 260 xH motors with hollow shaft are suited for direct mounting to mechanical spindles. The hollow shaft permits you to convey coolant to tools with inner cooling.

The coolant is introduced at the rear of the motor through a rotating manifold (e.g. from Deublin, order no.: 1109-020-188). The shaft end is designed for this.

Mechanical data

Dimensions IM B35 (for securing by flange/base) as per EN 60 034-7

Flange: Dimensions as per DIN 42 948 and IEC 72

Protection as per EN 60 529: IP 54

Vibration severity

Grade SR (external precision balancing possible)

(IEC 60 034-14)

Thermal variables

Separate cooling via integrated fan
Temperature monitoring with KTY 84-130 thermistor in the stator winding
